EFYS	KS1 National Curriculum	KS2 National Curriculum	
<p>The World</p> <p>Children know about similarities and differences in relation to places, objects, materials and living things. They talk about the features of their own immediate environment and how environments might vary from one another. They make observations of animals and plants, and explain why some things occur and talk about changes</p>	<p>The principal focus of science teaching in key stage 1 is to enable pupils to experience and observe phenomena, looking more closely at the natural and humanly constructed world around them. They should be encouraged to be curious and ask questions about what they notice. They should be helped to develop their understanding of scientific ideas by using different types of scientific enquiry to answer their own questions, including observing changes over a period of time, noticing patterns, grouping and classifying things, carrying out simple comparative tests, and finding things out using secondary sources of information. They should begin to use simple scientific language to talk about what they have found out and communicate their ideas to a range of audiences in a variety of ways. Most of the learning about science should be done through the use of first-hand practical experiences, but there should also be some use of appropriate secondary sources, such as books, photographs and videos.</p>	<p>Lower Key Stage 2</p> <p>The principal focus of science teaching in lower key stage 2 is to enable pupils to broaden their scientific view of the world around them. They should do this through exploring, talking about, testing and developing ideas about everyday phenomena and the relationships between living things and familiar environments, and by beginning to develop their ideas about functions, relationships and interactions. They should ask their own questions about what they observe and make some decisions about which types of scientific enquiry are likely to be the best ways of answering them, including observing changes over time, noticing patterns, grouping and classifying things, carrying out simple comparative and fair tests and finding things out using secondary sources of information. They should draw simple conclusions and use some scientific language, first, to talk about and, later, to write about what they have found out.</p>	<p>Upper Key Stage 2</p> <p>The principal focus of science teaching in upper key stage 2 is to enable pupils to develop a deeper understanding of a wide range of scientific ideas. They should do this through exploring and talking about their ideas; asking their own questions about scientific phenomena; and analysing functions, relationships and interactions more systematically. At upper key stage 2, they should encounter more abstract ideas and begin to recognise how these ideas help them to understand and predict how the world operates. They should also begin to recognise that scientific ideas change and develop over time. They should select the most appropriate ways to answer science questions using different types of scientific enquiry, including observing changes over different periods of time, noticing patterns, grouping and classifying things, carrying out comparative and fair tests and finding things out using a wide range of secondary sources of information. Pupils should draw conclusions based on their data and observations, use evidence to justify their ideas, and use their scientific knowledge and understanding to explain their findings</p>
<p>Working scientifically’ is described separately at the beginning of the programme of study, but must always be taught through and clearly related to substantive science content in the programme of study.</p>			

Science Curriculum Statement of Intent: We aim to harness our children’s natural curiosity and inquisitiveness about the world. Our children are equipped with knowledge and understanding through fun and engaging scientific enquiries that have a real-world context. We aim to foster a love of investigation and actively promote independent discovery. We strive for our children to understand the uses and implications of science in the wider world, and to inspire them to become scientists of the future.

Beacon 3 (bold skills are statutory and a key focus)		Year 5	Topic Knowledge
Working Scientifically Skills	Ideas and Questioning	<ul style="list-style-type: none"> • Uses their scientific experiences to explore ideas and raise different types of questions • Talks about how scientific ideas have developed over time • Recognises the applications of specific scientific ideas 	<ul style="list-style-type: none"> • Describe the differences in the life cycles of a mammal, amphibian, insect and bird • Describe the life process of reproduction in some plants and animals • Describe the changes as humans develop to old age. • Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets • Know that some materials will dissolve in liquid to form a solution and describe how to recover a substance from a solution • Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating. • Give reasons, based on evidence from comparative and fair tests for the particular uses of everyday materials, including metals, wood and plastic • Demonstrate that dissolving, mixing and changes of state are reversible changes • Explain that some changes result in the formation of new materials and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda • Describe the movement of the Earth and other planets relative to the sun in the solar system; describe the movement of the moon relative to the Earth and the Sun, Earth and Moon as approximately spherical bodies. • Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky • Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object • Identify the effects of air resistance, water resistance and friction that act between moving surfaces • Recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect
	Planning	<ul style="list-style-type: none"> • Selects and plans different types of scientific enquiries to answer questions • Makes decisions about what observations to make, what measurements to use, how long to make them for and whether to repeat them • Chooses the most appropriate equipment to make measurements • Explains how to use the equipment accurately • Recognises when and how to set up comparative and fair tests • Recognises and controls variables where necessary (e.g. explains which variables need to be controlled and why) • Takes measurements, in standard units, using a range of scientific equipment, with increasing accuracy and precision 	
	Obtaining and Presenting Evidence	<ul style="list-style-type: none"> • Takes repeat readings where appropriate • Recognises which secondary sources will be most useful to research their ideas • Begins to separate opinion from fact • Records data and results of increasing complexity • Decides how to record data from a choice of familiar approaches • Calculates mean value where appropriate 	
	Considering and Evaluating Evidence	<ul style="list-style-type: none"> • Records and presents findings using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs • Reports on findings from enquiries, using relevant scientific language and conventions, in oral and written explanations such as displays and other presentations • Uses and develops keys and other information records to identify, classify and describe living things and materials • Identifies conclusions, causal relationships and explanations of results • Identifies patterns that might be found in the natural environment • Draws valid conclusions, explains and interprets the results (including the degree of trust) using scientific knowledge and understanding (e.g. recognises limitations of data) • Identifies scientific evidence that has been used to support or refute ideas or arguments • Uses relevant scientific language and illustrations to discuss, communicate and justify their scientific ideas • Makes practical suggestions about how their working method could be improved (e.g. sample size on reliability) • Uses results to identify when further tests and observations might be needed • Uses test results to make predictions and to set up further comparative and fair tests
